

## CHAPTER V

### CONCLUSIONS AND SUGGESTIONS

#### A. Conclusion

Based on the results of the research and discussion in the previous chapter, it can be concluded that:

##### 1. Experiences

Based on the result, it can be seen that there are two aspects of students' experience in distance learning, namely aspects of attitudes and interests. On the attitude aspect, some students say that distance learning was very boring so they are less enthusiastic about participating in learning. While on the aspect of interest, some students say that they did not like distance learning because distance learning required money to carry out learning.

##### 2. Impact on students

Based on the results, research found the impact of distance learning on students, namely, students had difficulty in using the WhatsApp and Zoom applications, hence that the students are difficult to understand the material because the material presented was quite short and limited time to ask teachers and other friends, as well as an inadequate internet network. Also some students do not have smartphone, hence they have to take turns studying with friends who have one.

## B. SUGGESTION

Based on the conclusions obtained, the suggestions that can be given are as follows:

1. For the teacher

For teachers to be able to provide interesting learning so that students do not feel bored receiving learning material remotely.

2. For the other researcher

As a reference for other researchers when they want to do research with a topic entitled student experiences in distance learning.
