

ABSTRAK

Nurmayanti H. Ahmad (91811407133024) Hubungan Karakteristik Mahasiswa Kondisi Lingkungan Keluarga dan Masyarakat Dengan Minat Bekerja Di Bidang Pertanian, dibawah Bimbingan Andri Amaliel Managanta dan Toyip.

Pengembangan pertanian di Indonesia masih mengalami permasalahan yang cukup serius karena rendahnya minat generasi muda terhadap pertanian. Hal tersebut diduga karena adanya faktor pendorong dan faktor penarik sehingga generasi muda tidak berminat untuk bekerja dibidang pertanian. Penelitian ini bertujuan untuk mengetahui hubungan karakteristik mahasiswa dengan minat mahasiswa bekerja di bidang pertanian, menganalisis hubungan keluarga dengan minat mahasiswa bekerja di bidang pertanian, dan menganalisis hubungan faktor masyarakat dengan minat mahasiswa bekerja di bidang pertanian. Penelitian ini dilaksanakan pada bulan Juli 2022 sampai September 2022 pada Jurusan Agroteknologi Fakultas Pertanian Universitas Sintuwu Maroso Poso. Sampel pada penelitian ini sebanyak 94 mahasiswa dari 123 mahasiswa aktif. Berdasarkan hasil penelitian bahwa karakteristik mahasiswa baik jenis kelamin, pengalaman budidaya dan asal daerah memiliki hubungan dengan minat mahasiswa bekerja dibidang pertanian. Faktor keluarga baik pekerjaan orang tua dan kepemilikan lahan memberikan hubungan dengan minat mahasiswa bekerja dibidang pertanian. Rata-rata orang tua yang bekerja dibidang pertanian dengan luasan lahan 1,81 ha per keluarga dapat menjadi modal bagi mahasiswa untuk meneruskan usaha milik orang tua dibidang pertanian. Faktor masyarakat baik tetangga dan budaya setempat memberikan kecenderungan cukup kuat terhadap keinginan mahasiswa untuk bekerja dibidang pertanian.

Kata Kunci : Keluarga, Mahasiswa, Minat, Pekerjaan dibidang Pertanian.

ABSTRACT

Nurmayanti H. Ahmad (91811407133024). *The Relationship between Student Characteristics, Family and Community Environmental Conditions, with Working Interest in Agriculture*. Supervised by Andri Amaliel Managanta and Toyip.

Agricultural development in Indonesia is still experiencing serious problems due to the low interest of the younger generation in agriculture. This is presumably due to push and pull factors. This study aims to find out the relationship between student characteristics and student interest in working in agriculture, analyze the relationships between students' family with student interest in working in agriculture, and analyze the relationship between community factors and student interest in working in agriculture. This research was conducted from July 2022 to September 2022 at the Department of Agrotechnology, Faculty of Agriculture, Sintuwu University, Maroso Poso. The sample in this study was 94 students from 123 active students. Based on the results of the study that the characteristics of students, both gender, cultivation experience and regional origin have a relationship with students' interest in working in the agricultural sector. Family factors, both parental occupation and land ownership, have a relationship with student interest in working in agriculture. Most of the parents who work in agriculture with an area of 1.81 ha per family can be used as capital for students to continue their parents' business in agriculture. Community factors, both neighbors and local culture, have a strong tendency towards students' interest to work in agriculture.

Keywords: Family, Students, Interest, Working in Agriculture
