

CHAPTER V

CONCLUSION AND SUGGESTIONS

A. Conclusion

Based on the results of research that carried out at MTs Negeri 3 Poso, it can be concluded as follows:

Data analysis using the Paired Samples test from the mean table showed an average difference between the pre-test and post-test scores, meaning that there was an effect but not significant on the average change from pre-test to post-test. Furthermore, from the t-test, the value of Sig (2-tailed) is $0 < 0.05$. This means an popular songs can affect students' listening skills, but the effect is not so significant.

So it can be concluded that H_0 is rejected and H_a is accepted because the value of Sig (2-tailed) is $0 < 0.05$ and showed an improved average value from pre-test and post-test. Based on it, there is a not significant effect between the use of popular songs with listening skills on first-grade students of MTs Negeri 3 Poso.

B. Suggestions

Based on the results of the research obtained and the discussion above, the following suggestions can be submitted :

1. For teachers

Are advised to know listening skill learning media with popular songs in the classroom.

2. For students

It is very important to improve listening skill, to increase vocabulary and they can be more motivated and enthusiastic to learn by using popular songs

3. For other researcher

Make this research as additional knowledge and information about listening skills if want to do research related to this research.
