

CHAPTER V

CONCLUSION AND SUGGESTIONS

A. Conclusion

Based on the results research, it can be concluded that process of the teacher using audio-visual media is not in accordance with the theory of implementing audio-visual media by Hasan (2021), especially at the preparing and implementing stages. In the preparation stage, the teacher did not prepare the audio-visual media in the lesson plan in detailed. In the implementation stage, the teacher had implemented audio-visual media in class but not all students have received the material conveyed through the media. Furthermore, in the follow-up stage, the teacher invited students to discuss their understanding of the material that the teacher had through using audio-visual media.

B. Suggestions

Based on the results of the research above, the suggestions that researcher can provide are expected to be considered in the progress of using audio-visual media at SMP Negeri 2 Poso, as follows.

1. For teacher

The researcher hope that teacher will continue to teach English using audio visual media in the classroom. The teacher to teach using audio-visual media must prepare the media from far away day and detail. Then in the implementing the media, the teacher must rebuke noisy students who disturb

the concentration of other students, hence the material that the teacher want to convey through audio-visual media is conveyed properly. In using media the teacher must prepare and implement the media well, thus that learning objectives can be achieved.

2. For Next Researcher

The researcher hopes that next researcher will conduct research and discuss the five stages in choosing audio-visual media. In the fifth stage, the researcher hopes to be further investigated because at that stage it cannot be discussed in this research.
